SUMMARY

First-year CS Engineering student who has shipped three full-stack applications and placed in two competitive hackathons. Practical experience in Python, Flask, REST API integration across software, ML, and backend engineering. Open to internship opportunities.

Currently interested in: Docker and containerisation.

Relevant Coursework: Calculus, Machine learning, Data Structures and Algorithms.

TECHNICAL SKILLS

Languages	Python, C++
Web	HTML, CSS, JavaScript
Frameworks	Flask, React, OpenCV, Tesseract OCR, Pandas, NumPy
Tools	Git, GitHub, VS Code, SQLite, REST API Integration, Unity, Antigravity, Figma
Concepts	Machine Learning, RAG Architecture, OCR, Role-Based Access Control

PROJECTS

FinSor — AI Investment Research Platform | March 27th 2026 | Python · HTML · Flask · ML · RAG | github.com/gauravv3107/FinSor-Advisor

- Built a full-stack investment platform with a Random Forest model for dynamic SIP allocation, trained on 10,000+ historical financial data points; integrated real-time market data via third-party APIs.
- Implemented an AI advisory module using RAG architecture for context-aware investment Q&A, alongside portfolio analysis, risk profiling, and financial simulation across 6+ interactive modules.

Barrage — Digital Border Management System | March 14th 2026 | Javascript · Python · Flask · SQLite · OpenCV · Tesseract | github.com/gauravv3107/Barrage-System

- Architected a full-stack border management system with role-based access control across 4 user types; implemented automated passport verification using OCR (Tesseract + OpenCV), reducing manual data entry work.
- Built real-time alert systems, interactive dashboards, and integrated 3+ external APIs for live tracking; backend powered by Flask and SQLite to support high-throughput workflows. Won 2nd place at Megahackathon 2026.

CivicPulse — Bangalore Civic Issue Reporting Portal | March 5th 2026 | Javascript · Python · HTML · Flask · React · SQLite | github.com/gauravv3107/CivicPulse

- Built a civic issue reporting platform (potholes, streetlights, sewage) with a traffic-light status pipeline from filing through resolution, supporting 5 user roles with role-based dashboards; tested with 5+ users.
- Integrated Google Gemini 2.5 Flash for AI image validation; added Haversine-based duplicate detection within 20m, rate limiting (3 reports/device/hour), and a community upvoting system with daily energy pools.
- Shipped a multilingual UI in English, Kannada, and Hindi with a full analytics dashboard covering average response time, and community pressure scores. Won 1st place at Beginner Hackathon 2026.

ACHIEVEMENTS

- 1st Place — Beginner Hackathon: Delivered a functional, end-to-end project under strict time constraints, placing first among all competing teams.
- 2nd Place — Megahackathon 2026: Recognised for building Barrage, a full-stack digital border management system, in a competitive multi-team hackathon.

EDUCATION

Bachelor of Technology — Computer Science & Engineering

2025 – 2029

BMS College of Engineering (BMSCE), Bengaluru

CGPA: 9.05 / 10.0 (≈ 3.62 / 4.0) — Semester 1
